

Prime Ledger — Client Progress Report

Status: Live on production

Site: <https://65.1.92.180.sslip.io/>

Date: 4 August 2026

Bottom line. Prime Ledger now presents as its own product for normal users: branded login/signup (no ERPNext product naming on customer screens), navy + teal theme, a simple business home with numbered **Start here** steps, and everyday-language setup/portal copy. The full operations engine still runs underneath — the portal is the easier front door.

What we completed

Area	What changed	Status
Product branding	Customer-facing titles, logos, and footers say Prime Ledger	Live
Color theme	Navy #102A43 + teal #0F766E on login, signup, desk, wizard	Live
Login experience	PL logo, brand title, tips, larger buttons, plain language	Live
Signup	Sign up enabled: create account → email → sign in	Live
Post-login routing	Users go to the portal home, not the old Desk landing	Live
Setup wizard	Everyday questions; finish lands on portal home	Live
Business home	Welcome + Start here: Products → Sales → Purchases → Money	Live
Help / docs cleanup	ERPNext documentation links removed from help and errors	Live

Color scheme

Role	Color	Hex
Primary / navbar	Deep navy	#102A43
Accent / buttons	Teal	#0F766E
Soft accent	Lighter teal	#14B8A6
Page background	Cool paper	#F0F4F8

What the client should expect

When	What they should see
Open the site	Login page with Prime Ledger branding and navy/teal theme
New user	Sign up → check email → Sign in → short setup → business home
Existing user	Sign in → business home with Start here steps
Daily work	Tap Products, Sales, Purchases, or Money; more tools below
Advanced work	Advanced tools opens full operational screens when needed

Simple path for a first-time user

1. Open **/login**
2. Tap **Sign up** → enter name and email
3. Open the verification email
4. Return and **Sign in**
5. Answer a few easy setup questions about the business
6. Land on **Home** → tap **Step 1: Products** to begin

Easy-flow design goals

- Plain words instead of ERP jargon (Desk → Advanced tools; Tenant → Your business)
- Large buttons and clear Sign in / Create account labels
- Numbered Start here path on the business home
- Setup questions written for shop / warehouse / office staff without accounting training

What is intentionally unchanged

- Internal technical folders may still use the name erpNext (package / asset paths). Customers do not see this as product branding.
- Full operational screens (items, orders, stock, accounts) remain on the proven engine.
- Chemical / lab industry packaging is capability-ready via configuration; it is not a separate industry app install in this phase.

Suggested next steps

Item	Why it matters	Priority
Desk lockout for normal users	Keep everyday users on the simple portal; admins keep full access	Recommended
Subscription / pack controls	Turn modules on/off per plan (SaaS packaging)	Phase 2
Training walkthrough	Short guided tour on first login	Recommended
Own help docs	Replace removed ERPNext links with Prime Ledger help	Phase 2
Chemical / lab menu pack	Named menus from the blueprint if the client requires them	Optional

5-minute verification checklist

1. Open **/login** — PL logo, “Prime Ledger”, navy/teal theme
2. Tap Sign up — see the step tip
3. Sign in — land on business home (not a blank Desk)
4. Confirm Start here shows Products, Sales, Purchases, Money
5. Open one step — big Open ... button; no ERPNext product name on screen

Contact / environment notes

- Production URL: <https://65.1.92.180.sslip.io/>
- Portal routes: **/portal**, **/portal/tenant** (business), **/portal/admin** (site admin)
- Brand assets and easy-flow helpers are applied on the live server and kept in deploy branding scripts

Prepared for client sharing — Prime Ledger project team.
