

PRIME LEDGER

Chemical & Laboratory Operations

Flow Readiness Brief

Date: 4 August 2026

Prepared for: Client discussion

Scope: Chemicals, laboratory products, laboratory equipment, PCR / molecular biology — distributor / importer / wholesaler / institutional supply

Executive conclusion

Prime Ledger can run the confirmed chemical and laboratory distributor flow today. Purchase, import costing, sales, returns, batch/expiry, serial tracking, and quality inspection are already available. Alignment is **configuration and operating policy** — not a rebuild of the product, and not a change to the core transaction engine.

Area	Status
Core buy / sell / stock flow	Ready
Industry masters & warehouses	Configure
Dedicated CAS / SDS field masters	Optional later

1. End-to-end transaction flows

Blueprint document chains mapped to Prime Ledger documents already in the system.

Flow	Document path	Status	Notes
Local purchase	RFQ → Supplier Quotation → PO → Purchase Receipt → Purchase Invoice → Payment	Ready	Batch / serial / QI at receipt
Imported purchase	PO → Purchase Receipt → Landed Cost Voucher → Purchase Invoice → Payment	Ready	Multi-currency + landed cost
Sales	Quotation → Sales Order → Delivery Note → Sales Invoice → Payment	Ready	Batch / FEFO picking supported
Returns	Return note → credit / debit adjustment	Ready	Batch / serial reversal preserved
Stock transfer	Stock Entry between warehouses	Ready	Batch and serial carried across
Quality hold	Receipt → Quarantine WH → Quality Inspection → Released / Rejected WH	Ready (configure)	Warehouses + QI policy
Equipment service	Serial receipt → Asset / Maintenance / Calibration	Partial	Available; full lifecycle pack optional

2. Product master alignment

Industry need	Prime Ledger capability	Mode
Item groups (Chemicals, PCR, Equipment, etc.)	Item Group hierarchy	Configure
Manufacturer	Brand	Configure
Pack size / physical form as SKUs	Item Attributes + Variants	Configure
Lot, manufacturing date, expiry	Batch on Purchase Receipt	Ready
Equipment serial tracking	Serial No	Ready
Price by currency / segment	Price List / Item Price	Ready
Incoming QC	Quality Inspection	Ready
SDS / COA / TDS files	Attachments on Item / Batch	Configure
CAS, formula, storage, hazard fields	Not dedicated masters today	Optional later

3. What is ready now

- Local and imported purchasing with multi-currency
- Wholesale, retail, and institutional sales
- Batch, expiry, and serial traceability
- Landed cost for imports
- Quality Inspection on receipt
- Price lists, taxes, receivables and payables
- Stock transfers with lot preservation

4. Out of scope for this phase

- No change to the core buy/sell document flow
- No new chemical LIMS / assay module
- No dedicated CAS / SDS / PCR DocTypes in this phase
- SDS / COA handled via attachments until fields are added later (if needed)
- Industry sidebar packs remain optional

5. Configuration checklist (go-live alignment)

#	Action
1	Create Item Group tree for chemicals, media, PCR, kits, glassware, equipment
2	Enable batch + expiry (and serial where needed) on relevant items
3	Create Quarantine, Released, Rejected warehouses; map cold storage if required
4	Set Stock Settings pick method to Expiry (FEFO); disable negative stock
5	Require Quality Inspection on incoming for regulated items
6	Set up purchase / selling price lists, currencies, and tax templates
7	Attach SDS / COA / datasheets on Item (and lot COA on Batch when needed)

6. Recommended operating model

Phase	Focus	Outcome
A — Run on current engine	Groups, warehouses, QI, FEFO, price lists	Start buying and selling with batch/expiry immediately
B — Compliance hygiene	SDS/COA attachments, naming rules, quarantine SOPs	Clean audit-friendly operations
C — Optional enrichment	CAS / storage / hazard / PCR fields	Only if attachments prove insufficient

Client takeaway

Prime Ledger is **fit for the chemical trading flow**. The system can execute the full commercial and inventory lifecycle for chemicals, laboratory products, and PCR kits. Success depends on **master-data setup and warehouse/QC policy**, not on rebuilding the application.
